

Class UML Diagram

People

-Id: string
-Name: string
-Locale: string
-Age: integer

+get(): JSON
+delete(): JSON

NewPeople

-Id: string
-Name: string
-Locale: string
-Age: integer

+put(): JSON

Note: the reason for splitting out “People” vs “NewPeople” was related to the architecture of the flask_restful package - each class can only be tied to 1 endpoint, and the assignment required 2 endpoints.
