

# Class UML Diagram

---

## People

-Id: string  
-Name: string  
-Locale: string  
-Age: integer

+get(): JSON  
+delete(): JSON

## NewPeople

-Id: string  
-Name: string  
-Locale: string  
-Age: integer

+put(): JSON

Note: the reason for splitting out “People” vs “NewPeople” was related to the architecture of the flask\_restful package - each class can only be tied to 1 endpoint, and the assignment required 2 endpoints.
